

IN THE SPECIFICATION

Replace Paragraph 9 on page 2 with the following:

[0009] Methods of operating upon the data relating to the scene once an event is detected include providing a still image at intervals, typically every 5-10 frames using the data from at least the recording device that detected the event. In a further embodiment, still images from other recording devices that are associated in a predetermined manner with the recording device that detected the event are also obtained at intervals.
